## Evidencia 20: Consulta 20

The screenshot displays the pgAdmin 4 interface. On the left, the Object Explorer shows the database structure, with the 'tourism' schema selected. The main pane shows a SQL query titled 'CONSULTA 20 | Subconsulta | Alojamiento más caro'. The query is a complex SQL statement that joins the 'tourism.accommodations', 'tourism.owners', 'tourism.accommodation\_types', and 'tourism.locations' tables. It filters for active accommodations and finds the one with the highest base price per night. The 'Data Output' pane at the bottom shows the results of the query, which is a single row representing the accommodation 'Panoramic Suite Villa'.

```
-- CONSULTA 20 | Subconsulta | Alojamiento más caro
